BOARD ELECTRIC

=====

The car is equipped with 2 batteries. 1 battery is absolutely and solely for the car and the 2nd for the "Reisemobil".

The electricity is organized in such a way that the car battery can never be empty.

On the control board you find also a "Voltmeter". As soon as it shows to you that it goes down up to 8 volt you should use a 220-volt plug or you should keep the motor running for a few minutes.

Fig. 10-1

The armature which shows you all details you will find underneath the locker in the kitchen.

Explanation:

1. 12 volt plug
2. "Voltmeter" for the second battery
3. switch for the akku loader
4. general switch for the fresh water pump
5. fresh water meter
waste water tank
6. general switch for the whole 220 volt
installation

All electrical details you will find in the lower wardrobe. Here you will find also the security plug.

The switch of the light above the round sitting area is on the right side when you enter into your "Reise-mobil".

Above the kitchen, in the bathroom and in the alkoven you can find always a 12 volt-transistor-lamp. Additionally you can switch it off or on directly on the lamp. On top of the round table area there you will find 2 lamps with the same specification.

The refrigerator

During you drive you can keep the refrigerator going. The best is on 12 volt. As soon as you are on a camping side you can use 220 volt. Or if you are in the country you can use gas. As soon as the engine stops the contact for 12 volt for the refrigerator is finished.

Underneath the wardrobe you will find more electical details. In order to find them you have to open the small wooden door.

Here you will find the following:

- switcher for gas

- loading gernerator for your board akku

G A S S U P P L Y

=====

2 gas tanks (2 x 5 kg) can be stored in a small room easily accessible from the outside of the "Reisemobil".

The gaspipes can be closed underneath the wardrobe.
There are 4 lines:

1. Heater
2. Cooker
3. Refrigerator
4. Hot-water-boiler

The switch for the ventilator and for the heater you will find on the left side of the wardrobe.

The switch for the hot-water boiler you will also find in this area.

III

W A T E R

=====

A 60-liter-fresh water tank is underneath the round sitting area. When you lift the polster and the wooden cover you will see all the details concerning water. The fresh-water-pump is in the fresh-water-tank.

The hot-water-boiler becomes visible when you lift the cover within the round sitting group on the left side at the back.

When you fill in fresh water the warm-water-system will be filled automatically. (Contents 10 liter) When all tanks are completely empty it lasts a bit longer before fresh water comes into the kitchen because all the water is running through the warm-water-boiler before.

At the outside you have a waste-water-tank. There is a control-pendel where you can see when the waste-water-tank is filled.

You will also find a special pipe for the kitchen and for the toilette room. By means of this you can directly pipe the water into the field beside of the waste-water-tank.

This is an important factor in winter time.

We recommend you to empty all pipes and tanks in case of not using the car for a longer period because frost is very dangerous for your Motorcaravan when there is water in the tanks.

If you wish to empty all pipes and tanks, close to the warm-water-boiler you will find a red switch. This switch you have to turn round and then all the water will run out of the warm-water-boiler.

I M P O R T A N T

=====

In order to empty the car completely you have to open the water-taps before you open the waste-water pipes

Take care that the waste-water and fresh-water-tanks and also the warm-water-boiler are empty when the car is not used for a longer period of time or in case of frost.

S I T T I N G G R O U P

=====

The conversion from a sitting group into a sleeping area is very simple.

You put the table down. Then you can take the two small upholsteries underneath the windows and you have a comfortable bed.
